

Ivens Signorini — Senior Backend Engineer (Go)

📍 Porto, Portugal · **Fully Remote** · ✉ ivens@signorini.cloud · 🔗 linkedin.com/in/ivens-signorini ·
GitHub: github.com/ivensfernando

PROFESSIONAL SUMMARY

Senior Backend Engineer specialising in Go microservices and high-throughput backend systems. Track record of owning backend systems end-to-end — from legacy modernisation initiatives to greenfield cloud-native builds — most recently across 24/7 energy trading and commodity trading platforms. Strong background in distributed systems, scalable API design, and production incident investigation. Also delivers React frontends where an engagement calls for full-stack ownership. Comfortable working in ambiguous environments and driving backend architecture decisions with a pragmatic, ownership mindset. Open to Senior/Staff Backend roles — fully remote or hybrid.

CORE SKILLS

Languages: Go (Golang) · Java · React (TypeScript/JavaScript) **Practices:** CI/CD **Data:** PostgreSQL · MongoDB · ArangoDB · Oracle · DB2 · Redis **APIs & Architecture:** REST APIs · gRPC · Microservices · Distributed Systems · System Design **Frameworks:** Gin · Spring Boot **Domains:** SaaS · Fintech · Trading · Blockchain/Web3 · Enterprise Systems

EXPERIENCE

Senior Backend Engineer (Contract) — Privorum BV · Remote

January 2020 — Present · Go · PostgreSQL · React · Cosmos · Solidity

Contract engineering delivered through Privorum BV for SaaS, fintech, and Web3 clients. As the senior engineer I own the full delivery — architecture, backend, frontend, and deployment — for each engagement.

- **Sfinx:** Built the Go microservices behind a 24/7 energy trading platform, with PostgreSQL tuned for high-throughput workloads. Built and released through GitLab CI, and integrated with blockchain settlement APIs.
- **Reusify:** Delivered the Go backend and React frontend end-to-end, with ArangoDB (AQL), PostgreSQL and Redis in the data layer. Owned the architecture, API design, infrastructure, and production operations — full end-to-end ownership.
- **Vosbor Exchange:** Contributed backend engineering to a commodity trading platform with a Cosmos-based blockchain layer, taken from concept through MVP, funding, and closed beta. Worked on distributed Go services and complex system integration.
- **Unveil Art:** Delivered a Web3 project — Solidity smart contracts on Ethereum and Web3 backend integrations for decentralised applications.
- **Further engagements: Defy Trends** — Go backend for an AI-driven crypto analytics platform. **Genie AI** — contributed backend Go engineering as part of the team. **Gimly** — blockchain platform integration in Go. **Mavin** — Go backend services and REST APIs.
- Partnered directly with founders on architecture decisions, CI/CD hardening, and pragmatic technical trade-offs across all engagements.

Backend Engineer (Contributor) — MDL Talent Hub · Netherlands

March 2018 — December 2022 · Go · REST APIs

- Contributed Go backend services and APIs to a blockchain platform delivering a crypto wallet solution for artists.
- Worked on system integration across distributed services; contributed to CI/CD pipelines and release automation.

Sr. Fullstack Developer — MINC Groep (now Paragon Fulfilment) • Netherlands

May 2018 – July 2020 • *Java • Spring • Spring Boot • React • CI/CD*

- Single-handedly modernised the company's legacy platform: migrated monolithic Java applications toward a modern service-based architecture using Java, Spring and Spring Boot — stabilising production while incrementally reducing technical debt.
- Designed and built distributed backend services and APIs, improving reliability and decoupling enterprise modules.
- Built React frontends on the new services; improved CI/CD automation and deployment processes.

Lead Software Developer — Comentarismo • Netherlands

November 2016 – March 2018 • *Go • MongoDB • Git*

- Lead developer for Comentarismo — an embeddable comment engine with conversation analytics and experimental sentiment detection.
- Owned the Go backend and APIs end-to-end; designed the data layer in MongoDB and delivered the embeddable widget integration.

Lead Developer — Marisa Lojas Varejistas Ltda • Greater São Paulo, BR

May 2010 – May 2016 • *Java • Spring • Struts • IBM WebSphere • Oracle*

- Technical lead for the backend of Marisa's private-label credit card system — the consumer-credit platform behind the store card of one of Brazil's largest fashion retailers.
- Maintained the legacy Java EE application (Struts/JSP/IBM WebSphere/Oracle) while building new components in Spring; owned technical direction across mission-critical, high-volume operations for six years.

Sr. Java Developer — Banco Santander • Greater São Paulo, BR

December 2009 – May 2010 • *Java • JSF • DB2 • Oracle • Mainframe integration*

- Senior Java Developer on the systems integration during Santander's acquisition of ABN AMRO (Banco Real) — merging two banks' platforms.
- Worked on the international transaction system; developed in Java/JSF with a mainframe-bridge tool backed by DB2 and Oracle.

Earlier roles — 2005–2009 • Greater São Paulo, BR

- **Java Developer — C&A Brasil** (Jul–Dec 2009): retail systems for one of Brazil's largest fashion retailers.
- **Java Developer — Claro Brasil** (May 2008 – Jul 2009): enterprise integration projects at one of Brazil's largest telecom operators.
- **Software Development Engineer — Cyber1 do Brasil** (Jan 2007 – Apr 2008).
- **Java Developer — Frames** (Aug 2005 – Dec 2006): Java batch-processing systems.

EDUCATION

MBA, Corporate Systems Development — Brazilian Institute of Advanced Technologies **BSc, Computer Systems Analysis** — University of Taubaté

PROFILE

Go primary, React where the engagement needs it • Trading, fintech and SaaS backends • Legacy modernisation & cloud migration • End-to-end ownership mindset • Remote-first • Open to fully remote roles from Portugal.
